

# Reducing Time to Market With Additive Manufacturing Services

As technology continues to advance, Emerson is taking the lead on delivering state of the art services like additive manufacturing. With capabilities like printing 3D model test fixtures of customer applications, our customers are decreasing waste time by going beyond traditional manufacturing methods.

Customers using Branson technologies are seeing more and more advantages to this service, mainly because it helps them get to market on time and within budget. With its massive potential in almost every industry, our experts are leveraging these technology trends in their deliverables.

Using the industry's best practice, our engineers analyze the most crucial factors to design tooling with the best possible combination of acoustical and mechanical properties. We understand that time is a key factor in your project. So we can use additive manufacturing to condense development time, manufacturing time and overall lead time be it prototypes, production or refurbishment. This gets you the parts you need faster in order to stay on or even improve your schedule.
