

Executive Bio

Seth Harris

*Director of Sustainability, Americas
Emerson*

Seth Harris is the director of sustainability in the Americas for Emerson, assisting customers in achieving their sustainability goals while growing the company's sustainability initiatives and sales.

In his current role, Harris leads direct sales engagement in the Americas, establishing growth programs for the company's sales channels, identifying opportunities to expand or enhance relevant product offerings based on customer needs, and forging partnerships in new technologies or adjacent industries that promote and advance Emerson's sustainability strategy. Harris brings expertise in upstream oil and gas industry regulatory engagement and decarbonization initiatives, and now more broadly helps Emerson and its customers improve energy use, reduce emissions and develop and deploy innovative technologies such as hydrogen and carbon capture and storage that deliver on their sustainability goals.

Since joining Emerson in 2005, Harris has worked in numerous roles, including helping customers with their digital transformation initiatives and growing the company's software and data management business. He also held several management positions, responsible for customer sales and engagement around Emerson's product portfolio including measurement and flow, software and valves.

Harris holds a bachelor's degree in chemical engineering with emphasis in bioengineering from the University of Colorado at Boulder.
