

Automatic Sprinkler Systems for Commercial Fire Suppression

Customer Problem

An automatic sprinkler manufacturer was developing the next generation deluge system and was seeking a solenoid valve supplier to help them achieve their technical requirements. The customer wanted solenoid valves that could be used on variety of systems, while also certifying these valves to new approvals.

Solution

The **ASCO™ 210 Series valves** are rugged and reliable valves that are also flexible enough to pilot most deluge sprinkler systems. This customer utilizes ASCO valves on most of its piloted automatic sprinkler systems and continues to partner with Emerson to bring new and improved products to market.

Results

- Reduced time to market for UL certified valves, developed and tested by Emerson
- Achieved customer technical specifications and performance goals
- Continued support as a trusted adviser in development of suppression systems
